Partnership proposal

Deal Hunter AI helps professional resellers evaluate opportunities before committing capital. The platform combines supplier cost, logistics, duties, taxes, resale fees, market evidence and risk signals into a documented decision.

What we request

- A time-limited read-only catalog feed or API sandbox.
- Product identifiers, professional prices, stock, images and permitted descriptions.
- Shipping rules, minimum order quantities, return terms and geographic restrictions.
- A technical contact for schema mapping and feed health.

What the partner receives

- Qualified professional demand directed toward eligible inventory.
- Aggregated, non-personal insights on searched brands, categories and price bands.
- Controlled product visibility respecting brand, territory and channel restrictions.
- A measurable pilot report: catalog coverage, matched demand and outbound interest.

Pilot safeguards

Scope	30-90 days, selected categories or territories
Access	Read-only API, CSV, XML, JSON, XLSX, URL or SFTP
Orders	No automated order placement during the pilot
Data	No resale or redistribution of the raw partner catalog
Security	Credentials stored as encrypted platform secrets
Control	Immediate suspension and deletion on partner request

The objective is simple: validate commercial value before requesting order automation or a long-term integration.

Technical integration

The connector layer normalizes heterogeneous supplier feeds into one controlled product model. Each source remains identifiable and can be disabled independently.

Supported delivery methods

REST / SOAP API	Incremental catalog, price and stock synchronization
CSV / XML / JSON / XLSX	Scheduled feed ingestion with strict validation
URL / SFTP	Automated retrieval with checksum and freshness monitoring
Manual sample	Schema validation before production credentials are shared

Decision model

- Full acquisition cost: purchase, shipping, duties, VAT and repair allowance.
- Expected resale proceeds after platform and payment fees.
- Evidence grade from A to D based on recent comparable sales.
- Professional status: Validated, Conditional, Review Required or Rejected.
- Maximum offer, break-even resale price, recommended channel and indicative sale horizon.

Data governance

- Tenant isolation and source-level access controls.
- No credentials in source code; secrets remain outside the repository.
- Traceable synchronization logs and source health monitoring.
- Partner-specific retention, display and geographic rules can be enforced.

Next step

Share a sample feed containing 20-100 products and its field documentation. Deal Hunter AI will return a mapping report, integration estimate and pilot scope.
